Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	4 Marks

Ideation Phase – Brainstorm & Idea Prioritization Template

Brainstorm & Idea Prioritization Template:

Brainstorming provides a free and open environment that encourages everyone within a team to participate in the creative thinking process for ServiceNow Incident Management optimization. Prioritizing volume over value, out-of-the-box ideas are welcome and built upon, helping each other develop rich automated workflows, dynamic UI policies, and efficient client scripts.

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Brainstorm & Idea Prioritization

Use this template in your team brainstorming session so your members can shape client scripting logic and UI policies for the Incident form.

🕒 10 minutes to prepare

🕒 1 hour to collaborate

👥 2-6 people recommended

Before you collaborate

A little preparation goes a long way. Define participant roles, prepare incident form requirements, and align on automation goals.

Define your problem statement

"How might we optimize the Incident Management form using Client Scripts & UI Policies to reduce agent input errors, dynamically enforce mandatory fields based on Category, and improve resolution speed?"

Key rules of brainstorming:

- Defer judgment — focus on volume of scripts & rules first
- Encourage wild technical & user-experience ideas
- Build on the ideas of others (e.g., combine UI Policy with onLoad script)

Step-2: Brainstorm, Idea Listing and Grouping

Gather ideas for Incident form validation, automatic field hiding/showing, field population, and priority calculation.

Dynamic State Read-Only

Make 'Impact' and 'Urgency' read-only via UI Policy once the Incident state moves to 'Resolved' or 'Closed'.

— DEVELOPER A

Caller Details Auto-Populate

Use onChange Client Script on 'Caller' to auto-fill Location, Email, and Manager details instantly.

— DEVELOPER B

Mandatory Close Notes

Apply UI Policy Rule to make Close Code and Close Notes mandatory only when State changes to Resolved.

— QA LEAD

VIP Caller Highlight

Client Script (onLoad) checks if Caller is VIP; highlights priority field in red and displays alert banner.

— SYSTEM ADMIN

Subcategory Field Dependent

Dynamically clear and repopulate Subcategory choices using Client Script based on Category selection.

— DEVELOPER A

Prevent Future Reopen Date

onSubmit Client Script to validate custom date fields and prevent setting future dates for incident occurrence.

— PROCESS OWNER

Group Ideas & Clustering Analysis

Take turns reviewing the proposed solutions for the Incident module. Group ideas into functional clusters (Client-Side Validation, UI Policies, UX Enhancements) to evaluate feasibility and maintenance impact.

Cluster A: UI Policies (No-Code)

- Mandatory Close Notes on Resolve
- Read-only fields when Incident is Closed
- Show/Hide 'Hardware Category' specific fields

Cluster B: Client Scripts (Scripting)

- Auto-populate Caller info (onChange)
- VIP Caller visual alert (onLoad)
- Date validation on form submission (onSubmit)

Step-3: Idea Prioritization

Place ideas on this 2D grid to determine which Incident features are high importance vs high feasibility.

Action Plan: Implement High Feasibility / High Importance UI Policies first, followed by Caller Auto-Populate Client Scripts.

Status: Approved for Sprint
