

Ideation Phase

Define the Problem Statements

Date	30 September 2026
Team ID	6ab9453830f9767f8773c674
Project Title	Implement Client Script & UI Policy (Incident)
Maximum Marks	2 Marks

Customer Problem Statement Template:

Create a problem statement to clearly understand the point of view of the primary user of the ServiceNow Incident form. The problem statement focuses on the challenges faced during incident creation and updating, especially when fields are unclear, unnecessary, or require manual validation.

A well-articulated problem statement helps the project team identify the actual user need and design an effective solution using Client Scripts and UI Policies. It keeps the solution focused on improving usability, data accuracy, and the efficiency of Incident management.

Problem Statement (PS)

PS	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	a Service Desk Agent / Incident User	create and update Incident records quickly and accurately	the form contains many fields and it is not always clear which fields are relevant or required	the Incident form may display unnecessary information and provide limited guidance during data entry	confused and concerned about entering incomplete or incorrect information
PS-2	a Service Desk Agent / Incident User	enter Incident information according to the selected situation and process the ticket efficiently	some field visibility, mandatory requirements, and validation may need to be handled manually	without dynamic Client Script and UI Policy behaviour, users can spend more time correcting or validating information	frustrated by extra steps and less efficient Incident handling

Reference: Customer Problem Statement structure from the uploaded project template. The reference organizes the statement using "I am (Customer)", "I'm trying to", "But", "Because", and "Which makes me feel", with PS-1 and PS-2 entries.
