

Project Design Phase Solution Architecture

Date	30 September 2026
Team ID	6ab9453830f9767f8773c674
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	4 Marks

Proposed Solution Template

Project team shall fill the following information in the proposed solution template.

S.No.	Parameter	Description
1	Problem Statement (Problem to be solved)	The Incident form in ServiceNow needs better control over field behavior and user input. The solution should use a Client Script and UI Policy to make the Incident form more user-friendly, reduce incorrect or incomplete data entry, and dynamically control fields based on the selected values.
2	Idea / Solution description	Implement a Client Script and UI Policy on the Incident table. The Client Script will perform client-side actions when the form loads or when a relevant field value changes. The UI Policy will dynamically control field visibility, mandatory status, or read-only behavior according to the required Incident conditions. Together, these configurations provide a simple and efficient form experience without unnecessary server-side processing.
3	Novelty / Uniqueness	The solution combines Client Script logic with UI Policy configuration so that the Incident form responds dynamically to user actions. It reduces manual checking by automatically applying the required field rules and provides consistent behavior for Incident records.
4	Social Impact / Customer Satisfaction	A well-controlled Incident form helps service desk users enter accurate information and reduces confusion during incident creation or updating. This can improve data quality, reduce avoidable errors, and support faster and more consistent handling of incidents, which contributes to better customer and user satisfaction.
5	Business Model (Revenue Model)	The solution is intended as a ServiceNow configuration for organizational use. It can be implemented as part of a ServiceNow service-management project, customization, or consulting engagement. Organizations can benefit from reduced manual effort and improved incident-management efficiency.
6	Scalability of the Solution	The solution can be extended to other Incident fields and additional business requirements by updating the Client Script conditions and UI Policy rules. Similar configuration patterns can also be applied to other ServiceNow tables and forms, allowing the solution to grow with organizational requirements.
