

PROJECT DEVELOPMENT PHASE

Functional & Performance Testing Template — Model Performance Test

Date	30 September 2026	Team ID	6ab9453830f9767f8773c674
Project Name	Implement Client Script & UI Policy (Incident)	Maximum Marks	N/A

Test Scenarios & Results

Project team shall fill the following information in model performance testing template.

TEST CASE ID	SCENARIO (What to test)	TEST STEPS (How to test)	EXPECTED RESULT	ACTUAL RESULT	PASS/FAIL
FT-01	Incident Form Field Validation	Open Incident → Create New and enter valid and invalid values in the configured fields.	Valid values are accepted and invalid values are handled according to the Client Script configuration.	The configured Client Script validates the entered values as expected.	PASS
FT-02	UI Policy Field Behavior	Open a new Incident and change the field/value that triggers the configured UI Policy.	The configured field becomes mandatory, read-only, or visible/hidden according to the UI Policy condition.	The UI Policy changes the field behavior as configured.	PASS
FT-03	Incident Submission	Enter valid required details and click Submit.	Incident should be submitted successfully when all required conditions are satisfied.	Incident was submitted successfully with valid details.	PASS
FT-04	Incident Update	Open an existing Incident, modify the relevant field, and click Update.	The Client Script/UI Policy behavior should remain consistent during the update.	Incident was updated successfully and configured behavior worked as expected.	PASS
PT-01	Client Script Response Test	Open the Incident form and perform the action that triggers the Client Script.	The Client Script should respond without noticeable delay and apply the configured validation/behavior.	Client Script responded correctly and applied the configured behavior.	PASS
PT-02	UI Policy Response Test	Change the condition/field value that triggers the UI Policy.	UI Policy should immediately apply the configured field behavior.	UI Policy responded correctly and applied the configured behavior.	PASS
PT-03	Incident Form Load Test	Open the Incident creation form and verify that all configured fields and rules load correctly.	Form should load smoothly without errors or crashes.	Incident form loaded successfully with the configured Client Script and UI Policy.	PASS
